

Resolve ALL Your Allergies, Food Intolerances, & Chemical Sensitivities Without Drugs

Food and drug companies, doctors, universities, charities, governments -- none of them want you reading this book. They continue to gain wealth and power by continually denying the deadly dangers of man-made chemicals -- toxins causing ever escalating pandemics of disease, chronic illness, and allergies. Author Robert Wellesley was a businessman dominated by a lifetime of chronic allergy and health issues such as anxiety, fogginess, fatigue, acid reflux and depression. Motivated to finally feel healthy and with typical allergy remedies seemingly of little help, Robert began a quest, seeing if food additives, plastics, and man-made chemicals were somehow linked to his chronic ill health. Sifting through the academic research, what Robert uncovered was startling. Resolve All Your Allergies... is both the story of one mans long journey from chronic low-level illness to optimal, allergy-free health, as well as a practical plan of action, 58 specific Action Items you too can implement to resolve your own allergy and health issues, simply by getting toxins out of your life. Among the revelations: - While Europe bans 1350+ toxic food additives, the U.S. prohibits just 11 - 9 out of 10 chemicals allowed into food and cosmetics have NEVER been studied in detail - Scientists are well aware these chemicals are a leading cause of most of the cancers, heart disease, diabetes, MS, allergies, asthma (over 300 diseases/maladies, referenced in this book) - Even seemingly non-allergenic chemicals stack up to generate visible symptoms - Scientists have no idea, at the microbiological level, how chemicals are producing allergies, intolerances and sensitivities (all of which the author dubs chemical provocations), allowing many to continue to deny the dangers of these chemicals - Even trace amounts of toxic metals, in combination, are known to generate 100x disease effects in our bodies

- No scientist can ever pinpoint which mix of chemicals it was that made you unwell. Beyond mere sneezing, tearing, and itchy eyes, allergies manifest in dozens of ways, early signs of more serious future health consequences. If you feel chronic flu-like symptoms, are depressed, anxious, bloated, foggy, tired, sickly, achy -- likely, it is due to all these novel chemicals you eat, drink, touch, and inhale. Building on the work of other pioneers in the practical health movement -- Robyn O'Brien, Michael Pollen, Joseph Mercola, Carol Simontacchi, Russ Blaylock, Randall Fitzgerald, and others -- the author has left no stone unturned in his quest to come up with working solutions that anyone can use: simple, innovative remedies that worked for him and will work for you. Since one key to an allergy-free life is greater control over the quality of your food, this book also has a Cost-Saving Healthy Foods Shopping Guide -- strategies for buying healthy foods on a tight budget. Processed foods are not cheap. This book describes how to save money while eating better. Also included is the Maverick Allergy Map, a first-of-its-kind diagram of the mainland U.S. indicating best to worst regions for allergy sufferers (Arizona is not tops). Equal parts practical guide, passionate polemic, and exciting call to action -- this book is a bracing tonic meant to SHOCK you into taking your allergies and health, and the health of your loved ones, far more seriously. With its honest, down-to-earth perspective and the authors offbeat humor, this is a groundbreaking, frank work that informs, inspires and entertains. Make your life GREAT -- Dare to become more healthy and allergy-free than you ever thought possible. With proper care and feeding, your body is the most capable generator of good health in existence. But it all has to begin with you, wanting to be the hero of your own life. Given the proper knowledge and your will to act upon it, only you alone can resolve your health. The author has produced the toolkit -- now GET TO IT!
