companies are willing to pay you just to test their games. These companies want you to be a game tester and give them your advice on their developed games and in return they will pay you handsome sum of money. Im a living example of it. It would be right if I say this is an era of Internet and Video Games. Today the game industry is over a $60 billion business. The companies that release their produced games with bugs in them will cause them a loss of millions of dollars. And no good company will ever want that. So, they think it a good idea to pay hundreds of dollars to gamers just to point out the glitches in their games. So they can release bug-free games and customers will not return their games. Okay imagine this. You are a gamer and you buy a new video game that crashes every time your character shoots the enemy. It is obvious that you will not like the game and will never recommend it to anyone else. This will be a serious setback for the game company which had invested millions of dollars in the development of the game. And when no one buy their games due to the bad word-of-mouth advertising... the result is obvious: they will lose millions! Then What Are There Programmers For? Well, programmers are not gamers. So they cannot find the bugs that a video-game tester will. If a company is paying you $50 an hour just to test video games for them that would otherwise ruin the game experience and quite possibly hurt their sales. Then whats wrong in it?
