

# Transient Amnesia: Clinical and Neuropsychological Aspects (Major Problems in Neurology)

This addition to the Major Problems in Neurology monographs series covers the clinical features, aetiology, natural history and neuropsychology of transient global amnesia. It also contains information on related conditions and a chapter on permanent amnesia. It highlights current knowledge of memory and how it works, and proposes a diagnostic criteria for TGA. The author offers recommendations and provides advice for patients and family. He presents conclusions regarding the site and pathogenesis of TGA, and explores the wider implications for memory theory. Other titles in this series include Management of Neuromuscular Disorders, Cluster Headache Syndrome, and Huntingtons Chorea.
